

WCS Care

TestFlight Monetization Plan

From clear value -> validated demand -> sustainable revenue.

Version 1.0.3 - Released for TestFlight

World Class Scholars - Dr Christopher Appiah-Thompson

Starter (Free)

Care Pro (\$9.99/mo)

Care Team (Custom)

Principles & Segments

Monetization Principles

WCS Care monetizes by solving a specific problem for carers and dementia support teams: reducing confusion, saving time, and making daily routines more consistent. The initial commercial model stays narrow and practical. TestFlight is for learning rather than immediate revenue maximization.

Customer Segments

- Individual carers - family carers wanting a lightweight daily support system.
- Professional carers - support workers and small care teams who value shared notes, reports, and multi-profile management.
- Care organizations - dementia providers, clinics, residential groups; strongest candidates for higher-value subscriptions.

Operating Rule

Finish something useful, publish it, learn from feedback, and repeat. Calm consistency beats rushing for immediate sales.

Monetization Model

Stage 1 - TestFlight Validation

- Do not charge for TestFlight access itself.
- Free beta access in exchange for regular feedback.
- Waitlist for the upcoming paid Care Pro plan.
- Pilot interest form for organizations.

Stage 2 - Soft Monetization After Beta

Starter - Free

Care Pro - \$9.99/mo

Care Team - Custom

- Starter: daily routines, reminders, mood logs (1 profile).
- Care Pro: unlimited profiles, weekly summaries, exportable reports, shared notes, premium activity packs.
- Care Team: multi-user staff access, reporting, shared care plans, onboarding support, admin dashboard.

Paid Feature Gates

Premium features tied to measurable value, not novelty. Customers pay when the product clearly saves time, reduces confusion, or helps them avoid mistakes.

- More than one care profile.
- Weekly caregiver summaries and exportable PDF reports.
- Shared care notes across staff or family members.
- Premium activity packs and reminiscence modules.
- Smart reminder templates and routine duplication.

Five Commercial Questions for the Beta

- Which segment gets value fastest: family, professional, or organization?
- Which feature drives retention: routines, reminders, reports, or calming activities?
- Which message converts best: reduce confusion, save time, or improve consistency?
- Which plan feels credible: low-cost consumer or higher-value institutional?
- What proof is needed: testimonials, case studies, usage reports, clinical validation?

TestFlight Tactics & Pricing

In-App Tactics (live in v1.0.3)

- 'Plans & Pricing' screen with Starter, Care Pro, Care Team (UpcomingPlansView.swift).
- Plan-tap demand tracking via BetaAnalytics.logPlanInterest(tier).
- Care Pro waitlist sheet with email capture.
- Care Team pilot request form linked to the Vercel pilot endpoint.
- Top-15 active tester interviews each month.

Pricing Strategy

- Starter - free.
- Care Pro - monthly subscription at an accessible caregiver price (~\$9.99/mo indicative).
- Care Team - annual institutional pricing with onboarding and support.

Exact numbers will be refined from real user behavior rather than assumptions. The structure stays simple and easy to explain.

12-Month Monetization Roadmap

Months 1-3

- Launch TestFlight to family carers and support workers.
- Track activation, retention, top pain points.
- Add plan interest tracking and pilot inquiry forms.
- Customer interviews every two weeks.

Months 4-6

- Launch public waitlist for Care Pro.
- Offer early-access annual pricing to the first organizations.
- Produce case study + 30s demo proof assets.
- Finalize premium features based on what active testers actually use.

Months 7-9

- Turn on subscriptions for Care Pro.
- Start 2-3 institutional pilots.
- Measure conversion from active beta users to paid users.

Months 10-12

- Expand Care Team into a structured B2B offering.
- Add onboarding kits, reporting dashboards, renewal plans.
- Use customer proof in grants, partnerships, and investor conversations.

Success Metrics & Marketing

Five Metrics That Matter

- Activation rate - carers who create the first routine.
- Retention rate - carers still using the app after 4 and 8 weeks.
- Value signal rate - testers who tap into paid plan interest.
- Pilot conversion rate - organizations that move from demo to pilot.
- Paid conversion rate - active users who subscribe after launch.

Marketing Posture

Every monetization asset answers three questions: What problem does this solve? Who is it for? What happens after using it consistently?

- One-page pricing page with plain-language differences.
- Short case study from a family carer.
- Short case study from a professional or facility pilot.
- 30-second demo video (already produced - see marketing/out/).
